analysis_pcap_tcp.py: This program requires the dpkt library to be installed via pip. I recommend using Python 3.0+. Below Python 3.0+ has not been tested. To run, type in python3 analysis_pcap_tcp.py in your terminal. This will prompt you put in a file. Please for this program to work, you must put in a file name that's in the same directory as this python file or give in the full path to the file. This must be a PCAP file.
